

Logistic Support Planning & Implementation Service

Hospital Pass?

Are you suffering extended downtime losses due to new plant or equipment being delivered with no support implemented into your operation? Are you being held to account for the production losses?

Recover and Make the Play

Call us about our Logistic Support Planning and Implementation Service. We could help you recover a bad situation or better still, help prevent you getting into one.

The Logistic Support Planning and Implementation Service comprises:

- Needs - Engaging with site and operations staff over support and implementation parameters. Engaging with acquisition project staff over handover parameters.
- Planning - Development and communication of the integrated logistic support plan.
 - Establish the operational and maintenance context
 - Develop the detailed maintenance support plan
 - Personnel and training plan
 - Test and support equipment plan
 - Technical data plan
 - Information system support plan
 - Supply support plan
 - Facilities plan
 - Transportation, packaging, storage plan
 - Retirement plan
- Implementation - Communicating, coaching and establishing the support environment as per the integrated logistic support plan.
- Control - Project governance established utilising a PRINCE2 project plan methodology with client control gates.

Score the Points

The objective of the Logistic Support Planning and Implementation Service is to prepare the support environment to capably support assets for operation. Benefits include:

- Identification of asset related risks, options identification, and development of contingency plans.
- Identification of the capital costs of establishing the support for new assets.
- Establishment of detailed maintenance plan and integrated logistic support.
- Staff engaged and competent with the established logistic support for the asset.
- Reduced waste due to failures in the support environment, leading to improved availability.

Win the Game

Logistic Support Planning & Implementation Service

About Terotek

We are the Asset Management health professionals specialising in the planning and implementation of asset health solutions developing inspired, enabled and actively engaged workforces as part of an effective Asset Management strategy.

We aim to develop long-term strategic partnerships with our clients in order to deliver low risk, high value services at reasonable cost.

Terotek's mission is to engage and partner with organisations, in order to provide the most effective strategic asset management alignment, planning and execution services.

Our service range leverages the framework of the ISO 55001 Asset Management Standard and the discipline of PRINCE2 Project Management. These two cornerstones underpin an approach best described as "best for your business", in that they ensure project alignment with your asset management program, and business objectives to assure business, technical and scope risk are all appropriately managed. Targeted benefits include reductions in uncertainty and waste, and improvements in reliability and throughput.

Skills & Experience

The skills we use in delivering the Logistic Support Planning and Implementation service include: operations and maintenance planning; maintenance schedule development; logistic support planning; implementation planning, project management and a diverse range of business support execution skills.

Our experience to provide this service was founded in the Defence Forces and has been refined for industrial application.
